

## SUPPLEMENTARY DATA

**Supplementary Table 1: Clinical data for individual patients and at moment of relapse**

**Supplementary Figure 1. IL10 in remission patients.**

Peripheral blood mononuclear cells were cultured CpG-ODN. Total percentages of cytokine producing B-cells were determined within the CD19+CD22+ B-cell population. Graph represents 8 patients in sustained remission, without immunosuppressive treatment. NR-first indicates the earlier sample taken from the non-relapsing patients, NR-second the sample taken at a consecutive visit.
